

## COMPATIBLE VALVE/CARTRIDGE CHANGE GUIDE

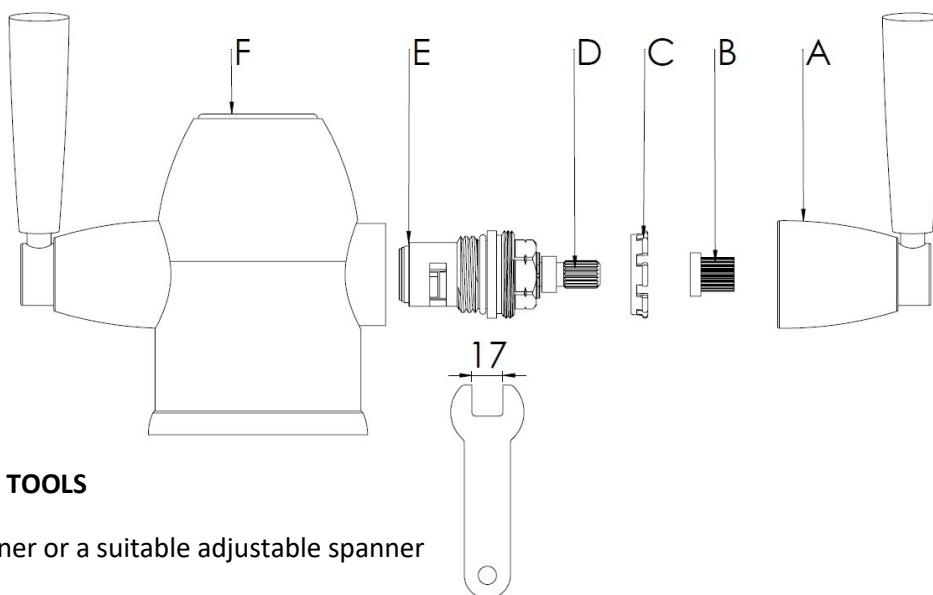

For use with the following Perrin & Rowe kitchen taps

Rubiq | Orbiq

### IMPORTANT! BEFORE YOU BEGIN

Replacing the valve/cartridge of a Perrin & Rowe tap is a straightforward procedure for any competent handy person. However, should you have any doubts about your ability to tackle the task, we suggest you engage a suitably qualified professional. You can also gain hints and tips about replacing a valve by watching our installation movies at TapSparesUK.com.

### ESSENTIAL TOOLS

17mm ring spanner or a suitable adjustable spanner

### VALVE/CARTRIDGE CHANGE PROCEDURE

1. Turn off the water supply to the tap
2. Pull off the lever handle assembly (A). A firm pull will be needed. Caution—using a screw driver to lever off the handle may result in damage to the plated finish of the tap, so take care.
3. Remove plastic vernier insert (B). It will either remain at the end of the old valve, or stay inside the handle (new verniers are supplied with your new valves).
4. Unscrew the old valve (D) using a 17mm or adjustable spanner. Bear in mind that it might take some initial force to free the valve if it has been there for sometime.
5. The valves are identified by the colour of the silicone insert E—you should have a red one and a blue one.
6. Screw each valve into the correct position and tighten firmly.
7. Check the spindle of each valve is in the closed position, then slide the new vernier insert on the splined valve spindle. Align the handle as close to vertical as you can manage, but without clipping it on completely. If the handle is not vertical, remove it carefully while keeping the vernier in place. Slide off the vernier and rotate it 1 or 2 notches. Try the handle again. Repeat this operation until you are satisfied with the lever alignment, then push the handle assembly fully home to engage the clip.
8. Turn on the water supply back on and check for leaks.
